

Data versus Information Data Sources for Business Analytics

A solid purple right-angled triangle is positioned in the bottom right corner of the slide, with its hypotenuse facing the top-left.

Data vs. Information

- Data:
 - Raw, unprocessed facts and figures without context. Data can be numerical, textual, or visual in nature, but it doesn't carry meaning on its own.
- Information:
 - Processed, organized, and given context, making it meaningful and valuable. When we structure the raw data in a way that answers specific questions, it becomes information.

Potential Data Sources

- Focused group studies
- Online surveys
- 10K or company annual reports
- Yahoo Finance
- Government sites: BLS, Census, SEC, etc.
- Industry Analysts
- Marketing research
- Web sites
- Etc.

Data Set and Database

- Data
 - Raw, unprocessed information, like individual numbers or text.
- Data Set
 - A structured collection of data points related to a specific topic or purpose.
- Database
 - A system that stores multiple data sets in an organized way, allowing for easy access and manipulation.
